FOREWORD

By PHILIP H. DEWEY

Secretary of Internal Affairs

The trend of industry toward lower levels, which began in the latter part of 1929, became increasingly apparent during 1931. Following a slight improvement in the early months of the year, which proved to be only temporary, production schedules of major industries throughout the United States were severely curtailed. The drop in the volume of goods manufactured was further accentuated by the decline in prices, bringing the value of industrial production in Pennsylvania, as shown in this report, below that of any recent year.

According to statistics compiled by the Federal Government, the volume of goods manufactured in the United States, with the influence of price changes eliminated, was 15.6 per cent lower in 1931 than in 1930. This was 32 per cent below the record volume of 1929, but remained 21 per cent above the last previous depression year of 1921. Not all industries were affected to the same extent, the heavy basic industries like iron and steel showing greater curtailment than many of the industries manufacturing directly for wholesale and retail distribution.

In Pennsylvania, as in the rest of the country, the trend toward lower wage rates continued, but the reduction in total wages and salaries of industrial workers was not as great proportionately as the decline in value of production. Number of industrial wage earners dropped 12.9 per cent as compared with the previous year. The only items in the industrial tabulations for the State as a whole which run counter to the general trend are number of electric motors in industrial plants and horsepower of electric motors, both of which increased slightly in 1931. Many other significant facts for the State at large and for each county and principal city and borough may be gleaned from the detailed tabulations which appear in this report.

The position of Pennsylvania as an industrial State is indicated by the Federal census of manufactures taken in 1930, the results of which have recently been made public. Of the 70 billions of dollars of products manufactured in the United States in 1929, Pennsylvania produced nearly seven and one-half billions, or 10.6 per cent of the National total. In mineral production Pennsylvania stands pre-

eminent among all the States, and in population, wealth and manufacturing she is surpassed only by New York.

The present report follows in most important respects the plan of previous editions, so that no detailed explanation of the contents of this volume appears to be necessary. One change to which attention should be directed, however, is the inclusion for the first time of statistics on railroad and street railway repair shops in the industrial sections of the report. This has the advantage of giving a fairer picture of the industrial importance of a city like Altoona, where the railroad shops are the principal industry. The new procedure, incidentally, is in conformity with the practice of the Federal Census Bureau in compiling industrial statistics for the United States.

Notwithstanding the difficult and serious situation with which business men have been faced during the last three years, it must be remembered that a reversal of the past trend is bound to come and those who are most alert will be in a position to profit from the upturn when it comes. The Department of Internal Affairs stands ready to assist Pennsylvania industries with all the facilities at its disposal.

Railroad Consolidation

The comprehensive consolidation plan announced by the Interstate Commerce Commission for the railroads in the East has exceeded in importance all other railroad developments during the year. The proposed merger would set up four great railroad systems, the Pennsylvania, the New York Central, the Chesapeake and Ohio, and the Baltimore and Ohio, with one of which systems every railroad in this territory is to be consolidated, if and when the plan is consummated. Because the plan is not mandatory it is generally agreed by railroad executives and interested bankers that the announcement of the approved plan will not mean immediate consolidation, although it is undoubtedly a long step in that direction.

This consolidation proposal advanced by the Interstate Commerce Commission is regarded as the most far-reaching decision ever handed down by that body. Some comprehension of the magnitude of this merger, unprecedented in the annals of railroad history in this country, may be gained from the fact that 295 railroads, including both long and short lines, are to be merged into four systems representing a total of 54,600 miles, more than twice the distance around the world. The investment involved is nearly ten billions of dollars, and not far from one million railroad employees will be affected.

The Pennsylvania System will extend from New York to Chicago, St. Louis, Kansas City and Omaha, merging 82 railroads and securing trackage rights on four others. The total mileage of the new system will be 16,900, approximately the same as that of the present Southern Pacific System, which is now longer than any other system. Investment in road and equipment of the railroads in the new system is \$3,300,000,000. Among the important new roads to be added to the Pennsylvania System under this plan are the Wabash and the Detroit, Toledo and Iron-ton.

The proposed Baltimore and Ohio System extends from New York to Chicago, St. Louis and Kansas City, merges 68 existing railroads, receives trackage rights on eight more, and will have a total mileage of 11,500. Investment of these railroads in road and equipment totals \$2,000,000,000. The most important additions to this system are the Reading, the Central Railroad of New Jersey, and the Western Maryland.

The New York Central System is to extend from New York and Montreal to Chicago and St. Louis, merging 75 railroads, with track-age rights on six more, and having a total mileage of 13,300. Investment in road and equipment is \$2,500,000,000. Among the important additions to this system are the Delaware, Lackawanna and Western and the Virginian Railway, which extends from Charleston, W. Va., to Norfolk, thus providing a new outlet to the Atlantic seaboard.

The Chesapeake and Ohio-Nickel Plate System, as approved by the Interstate Commerce Commission, extends from New York and New-

¹ Prepared by F. C. Gerberich, Chief of the Division of Public Utilities.

port News, Va., to Chicago and St. Louis, merges 70 railroads, receives trackage rights on seven more, and is to have a total mileage of 12,900. Investment in road and equipment of these railroads is \$2,000,000,000. In addition to the two roads around which this system is built, the plan includes the Lehigh Valley, the Erie, the Bessemer and Lake Erie and the Chicago and Eastern Illinois.

Announcement of the proposed consolidation was interpreted favorably by the securities market, and both railroad stocks and bonds immediately rose in value. It is obvious that not only will the plan simplify the railroad structure, but it will do away with much local competition among the railroads and enable them to meet and cope with the competition from other transportation agencies that has developed during the past few years. The natural tendency throughout the history of railroad development has been toward some form of consolidation, although in many cases the result has been attained by control of other lines through stock purchase either directly or through affiliated or subsidiary holding companies. Whether or not the plan of the Interstate Commerce Commission is finally put into effect in the form announced, there can be no question that the effect of the movement toward larger and more efficient operating units will be beneficial.

Railroads vs. Trucks

In the effort to regain some of the freight traffic now carried by trucks, some of the railroads have sought to inaugurate a system of store-door pick-up and delivery of freight. This plan has met with opposition not only from the trucking companies, but also from competing railroads which are not ready to embark upon the new delivery plan. It has been argued that store-door delivery by the railroads would be illegal in that the use of motor vehicles in such service amounts to extension of their rail lines without proper authority. The position of the railroad companies proposing the new service, on the other hand, is that they have no intention of extending their lines without proper authority and certainly not along city streets or highways. The plan is described as simply a natural desire on the part of the railroads to render as good service as their competitors and to do whatever they can within reason to regain some of the tonnage that has been taken from them. To do less, it is argued, would mark the railroad officials as unfaithful stewards, unfit to control great transportation enterprises in which billions of dollars of the people's money is invested. There can be no question that the railroads have the right to engage in competition with other transportation agencies and to do whatever is possible to prevent wrecking a great industry that was established a hundred years before the huge trucks of today sought the use of our highways.

It is frequently pointed out that the railroads run on their own road-beds, which they maintain at their own expense, while the trucks run on the public highways built by the Commonwealth at a cost frequently of \$50,000 per mile or more. Much is said nowadays about the truck lines as a steadily growing menace to the safety of the public highways. One suggestion is that if we must have freight lines operated along highways, the trucking concerns should be compelled to build and maintain their own roads subject to equal taxation and regulation, the same as the railroads. The railroads contend that this

would result in something like fair competition and place the two transportation agencies on an equal basis.

The Secretary of Highways recently declared that it was "never intended when the highways were built that trucks as big as freight cars should drive private vehicles from them," or that the public roads should be used for private profit by truck operators who pay no adequate tax for the maintenance of the roads. Experience has shown that trucks and buses have their useful place, but it does not follow that in filling that place they should destroy railroad facilities in which billions of the people's money has been invested, and which perform a service that, in part at least, the vehicles using the public highways are unable to give. Professor Ripley has calculated that it would take 6,250,000 five-ton trucks plying the highways of the country 24 hours per day to move the gross tonnage normally handled by the railroads. It is hardly conceivable that such a volume of traffic could conveniently and efficiently be carried by our highways, particularly in and through congested areas surrounding our large cities. It is certain that the ultimate cost to shippers if all freight were so carried would be many times above the railroad rates now in force. A fair adjustment of the conditions under which railroads and trucks operate must be made if a great industrial and financial disaster is to be averted. It is for this purpose that railroad executives, employes, security owners and others are joining forces for their own protection in advocating regulation that shall be just to all transportation interests and to the public.

Following is a brief summary showing the operating results of the railroads serving Pennsylvania during the year 1931. Complete details will be found in the following pages of this report.

Electric Street Railway Companies

The opinion of many railway executives is that a new type of trolley car is in the making, "light, safe and efficient," which in turn will send the present rolling stock to the scrap heap. Exhaustive reports by experts on some of the lines favor the substitution of gasoline buses, trackless trolleys and possibly the abandonment of outlying lines as a solution for the present crisis. Trolley as well as non-trolley riders are constantly reminded by advertisement, circulars and posters that it is cheaper to ride the street cars than automobiles.

In this connection we may cite a very formidable argument, contributed by the Harrisburg Railways Company, comparing the cost of street car and automobile operation between certain terminals. The street car company compares the cost of automobile operation at eight cents a mile for light-six cars, a figure considerably under that estimated by the Iowa Engineering Experiment Station, as against a trolley cost of one cent per mile based upon a continuous ride of seven

or more miles at a seven cent fare. For a ride of seven miles the cost to the automobile user would be 56 cents while the trolley fare would be only seven cents. Figures of this character should make regular users of automobiles do a little thinking, and to those who have been assuming that it is cheaper to ride in their own cars than on the trolleys the comparison may be an eye-opener.

Street railway companies have been and are constantly undergoing many changes, in some instances by consolidations and mergers, while in not a few cases abandonment of railway lines has taken place and buses have been substituted. Fifteen companies have thus been affected during the year, leaving a total of 184 companies reporting for 1931.

As stated in our previous report, street car companies make it possible for cities to grow, not in size alone but in resources and attractiveness. It is and has been for years past the electric traction lines that, first of all, pave the way for a progressive community and make its expansion a possibility. The permanent abandonment of so necessary and efficient a method of mass transportation in our larger cities is hardly conceivable.

The present plight of the street railway companies is again shown in the following statistical summary:

| | 1930 | 1931 | Increase or decrease (—) in 1931 |

Aeronautics

At the special session of the Legislature in 1932 the appropriation made to the State Aeronautics Commission at the previous regular session was cut off, so that the Commission was compelled to disband its personnel on August 17, 1932, and thereafter it practically ceased to function. The regulation of aeronautics in Pennsylvania had been begun with the organization of a Bureau of Aeronautics in the Department of Internal Affairs on September 1, 1927, working in conjunction with an advisory commission set up by the Legislature, and the work was continued on that basis until the State Aeronautics Commission was made a departmental commission as of June 1, 1929. The sudden cessation of the Commission's activities when its appropriation was taken away creates a decidedly anomalous situation, in that the law still requires a State license for pilots but there is now no way in which the present licenses can be renewed as they expire. The valuable service rendered by the Commission in safeguarding the traveling public and in encouraging a new industry has unfortunately been discontinued. Until the situation can be clarified at the next regular session of the Legislature, aviators in Pennsylvania will be unable to comply with the Pennsylvania law, although they must still hold the usual Federal permits.

Motor Vehicles

Motor transportation more than any other form of transportation is attracting widespread attention in the business world today. The motor truck and the motor bus are transporting passengers, express and freight directly to destination, in many cases in less time and sometimes at less cost than the established railroads. What is now needed, it is generally agreed, is equality of regulation among all forms of transportation, which would be a tremendous stride toward bringing order out of chaos. It is shown that in many cases well organized and equipped trucking companies have been making substantial profits, while the railroads are showing deficits. Proper regulation should be welcomed by all thinking operators, for otherwise they are sure to face ruinous competition.

The Division of Public Utilities received annual reports during the year from approximately 800 motor truck and bus companies. Of this number, but 238 show annual revenues exceeding \$10,000, while many of the small companies failed to report any revenue. A composite picture of the operations of these 238 larger companies is shown below:

Telephone Companies

During the last half century Pennsylvania, as well as the whole country, has witnessed amazing developments in the growth of the telephone. Fifty-four years ago Thomas E. Cornish gave Philadelphia its first telephone service. This he accomplished through a small switchboard installed in his electric shop, furnishing service for four telephones. A short time later this number was increased to 85 and the exchange removed to more commodious quarters. Heavy iron wire was used to connect the phones to the switchboards and the service was necessarily confined to Philadelphia only. Today Philadelphia and the whole of Pennsylvania can quickly establish voice contact with virtually every civilized country in the world. The one exchange and four telephones of the Bell Company of Philadelphia in 1878 have increased in number until this year we find they have 45 central exchanges in the city connecting approximately 350,000 phones.

In tabulating statistics relative to the telephone companies operating in Pennsylvania, the Division of Public Utilities finds a total of 245 companies reporting, or 19 less than reported in 1930. The same re-

ports indicate a gain of 3 per cent invested in plant and property over the previous year, but 97,741 fewer phones in use, a shrinkage of 3,112 employes, and a drop in wages paid of \$2,899,748.

A brief summary taken from the tabulations of the reports filed for the year ending December 31, 1931, follows:

| | 1930 | 1931 | Increase or decrease (—) in 1931 |
|----------------------------|-----------------|-----------------|--|
| Assets | \$3,548,072,808 | \$3,591,162,146 | 1.21% |
| Liabilities | \$3,197,438,150 | \$3,236,770,463 | 1.23 |
| Cost of plant and property | \$741,805,449 | \$766,393,360 | 3.31 |
| Phones in use | 1,612,053 | 1,514,312 | — 6.06 |
| Number of employes ... | 29,752 | 26,640 | —10.45 |
| Wages paid | \$44,486,255 | \$41,586,477 | — 6.51 |

Electric Companies

Reports were received during the year from 115 electric light, 93 electric power and 22 electric heat companies. Mention is again made of the fact that in the number of electric light companies reported many of the heat and power companies are included, as most of the larger companies report the manufacture and sale of electric light, heat and power. Hence there is a duplication in the number of reporting companies, although not in the operating statistics presented below.

In the compilation of these reports we find a steady gain in domestic consumption, despite the depression, while the commercial users including manufacturing industries show considerable declines. Among the many new developments in the electric field of late, special mention may be made of air conditioning apparatus now being developed for office buildings, stores, theatres and homes. The possibilities of home cooling by electricity in the summer months and of electric heating in the winter have scarcely been touched, yet this is only one of a number of outlets for a vast expansion in electrical consumption when the cost of new equipment and current for power and heating purposes can be brought within the reach of people generally.

From a tabulation of the reports received we are able to present the following brief summary:

| | 1930 | 1931 | Increase or decrease (—) in 1931 |
|--|---------------|-----------------|--|
| Capital invested | \$991,109,112 | \$1,024,022,146 | 3.32% |
| Number of employes | 23,372 | 23,184 | — .80 |
| Compensation paid | \$42,532,011 | \$41,366,448 | — 2.74 |
| Revenue derived from electric light | \$103,044,791 | \$104,477,461 | 1.39 |
| Total K. W. H. | 9,145,490,931 | 8,560,195,742 | — 6.39 |
| Revenue derived from electric heat | \$220,623 | \$214,144 | — 2.93 |
| Revenue derived from electric power | \$93,293,792 | \$84,996,594 | — 8.89 |

Manufactured Gas Companies

Forty-seven manufactured gas companies reported for the year 1931, being eleven less than reported for the same period in 1930. In spite of the elimination of these companies there was some increase in capital invested, but number of consumers and total revenue derived fell slightly. The number of employes increased and the wages paid decreased slightly.

A compilation of the reports thus filed shows that the changes in this industry during 1931 were much smaller than in most other industries, as may be inferred from the following figures:

| | 1930 | 1931 | <i>Increase or decrease (—) in 1931</i> |
|-------------------------|---------------|---------------|---|
| Capital invested | \$192,420,972 | \$194,136,866 | 0.89% |
| Number of consumers .. | 885,621 | 863,299 | — 2.52 |
| Revenue derived | \$37,267,441 | \$36,383,455 | — 2.37 |
| Number of employes | 6,494 | 6,604 | 1.69 |
| Wages paid | \$10,527,616 | \$10,376,895 | — 1.43 |

Natural Gas Companies

From a careful analysis of the data submitted by 153 natural gas companies reporting for 1931, we find the production to be 17 per cent less than during the same period in 1930, in which year the gas industry in Pennsylvania struck a new high production record. Tioga County still retains her position and is fast becoming one of the leading gas producing counties in Pennsylvania. Hundreds of leases have been recorded in the recorder's office at Wellsboro since the oil rush began in September, 1930, and the activity in this district, while much less frenzied than at the beginning, still continues.

The following figures show the extent of the decline in natural gas production throughout the State from the peak reached in 1930:

| | 1930 | 1931 | <i>Increase or decrease (—) in 1931</i> |
|--------------------------|---------------|---------------|---|
| Capital invested | \$171,159,463 | \$169,934,590 | — 0.71% |
| Gas produced (M cu. ft.) | 89,727,041 | 74,083,713 | —17.43 |
| Number of consumers .. | 640,096 | 630,504 | — 1.49 |
| Revenue derived | \$57,611,646 | \$46,491,237 | —19.30 |
| Number of employes ... | 8,121 | 6,548 | —19.36 |
| Wages paid | \$11,939,965 | \$9,915,066 | —16.95 |

Water Companies

The water companies in Pennsylvania passed through a serious and troublesome time during the year 1931, due to another most damaging drought, although conditions were not quite so severe as in 1930. Nevertheless many towns were without water or their supply was very much restricted, while farmers in many localities were compelled to haul water for their stock. With this unusual condition again prevailing, the companies were compelled to invest more in plant and property to care for future emergencies.

From an examination of the figures submitted by the 615 private companies and municipal plants reporting for 1931, we find a satisfactory condition of the companies, despite the handicap caused by drought and depression. Increases appear in every major item, save a slight decrease in number of employes and wages paid, as is shown in the following summary:

| | 1930 | 1931 | <i>Increase or decrease (—) in 1931</i> |
|--|---------------|---------------|---|
| Capital invested—municipal | \$184,684,660 | \$186,946,366 | 1.22% |
| Capital invested — privately owned | \$219,420,210 | \$231,570,976 | 5.53 |
| Number of consumers .. | 1,653,833 | 1,661,230 | .44 |
| Revenue derived | \$40,145,588 | \$40,610,413 | 1.15 |
| Number of employes | 7,439 | 7,343 | — 1.29 |
| Wages paid | \$9,826,667 | \$9,255,387 | — 5.81 |

PRINCIPAL STEAM RAILROADS

The principal railroads of the State may be grouped into two general classes, those operated by well-defined systems and by independent companies. The principal railroad systems operating in the State are:

| | <i>Miles in Pa.</i> |
|---|-------------------------|
| Baltimore & Ohio | 728.30 |
| Bessemer & Lake Erie | 221.86 |
| Buffalo, Rochester & Pittsburgh | 411.25 |
